

## Configuring Mac Operating System 8.0

You will also need the following account details, supplied to you by FunnelWeb Internet:

- Your UserName
- Your Password

### Please Note:

FunnelWeb Internet's Support Team cannot offer support for general Macintosh problems, modem hardware problems or any other TCP/IP software. We can only assist you with connectivity of Mac OS to our system. If you have a general problem with your Macintosh or modem configuration, you should contact the vendor directly.

### Let's start...

#### 1. Set up the Connection Icon:

Open the Macintosh HD, double click the "Internet" option, then select "Internet Setup Assistant".

Click "Update" to continue.

Next click "Add", then the right arrow to add a new configuration (or Modify if you're altering an existing one).

Name your connection "FunnelWeb Internet", then click the right arrow to continue.

Select your modem from the list – if your modem does not appear, the 3Com Analog 14.4K is a generic one for 14.4K modems, and the Hayes Optima/Accura 28.8K is likely to work for 28.8K modems. Specify the correct port for your modem (usually Modem Port), and "Tone" for the kind of dialling. Then click the right arrow to continue.

The Internet Setup Assistant will now ask for the phone number to dial, your username and your password. Enter the UserName and password as provided, and enter 0198 333 898 for the phone number. Click the right arrow.

Next you will be asked for your IP. Leave it on 'No IP' and click the right arrow.

Now set up the Domain Name Server and Domain Name.

The Primary DNS is 203.55.94.15, and the Secondary DNS is 203.24.218.12.

The domain name should be [funnelwebinternet.com.au](http://funnelwebinternet.com.au). Then click the right arrow.

The next screen shows the E-mail Address and Password request boxes - your e-mail address is [username@funnelwebinternet.com.au](mailto:username@funnelwebinternet.com.au), and your password is the one supplied. Click the right arrow to continue.

Now you must enter your POP and SMTP server. Your POP account is your UserName, and the POP server address is [pop.fwi.net.au](http://pop.fwi.net.au). The address for the SMTP server should be [smtp.fwi.net.au](http://smtp.fwi.net.au), and then click the right arrow.

Now all you have to do in the future to connect to the Internet, is to double click on the Internet Dialler in your Internet folder, and once connected start your browser! If you have any difficulties, please contact FunnelWeb Internet on 1300 360 024 or email [support@fwi.net.au](mailto:support@fwi.net.au).
